Harmonising the deployment of Connected and Automated Driving

ARCADE supports the commitment of the European Commission, Member States, the industry, social partners and civil society to develop a common approach to develop, test and validate Connected and Automated Driving (CAD) in Europe and beyond.

This Support Action fosters stakeholder cooperation to build consensus on deployment scenarios and research needs for safe, efficient, socially responsible and environmentally friendly driverless mobility for EU citizens.

ARCADE consolidates a Knowledge Base of methodologies and standards for evaluation, data and best practice from previous research and field operational tests on CAD.
